PROFESSIONAL SUMMARY

DevOps Engineer with 6 months of hands-on experience in AWS Cloud, Linux Administration, CI/CD, Infrastructure as Code (IaC), containerization, and application deployment. Experienced in building and managing AWS infrastructure, automating deployments using Jenkins, provisioning infrastructure with Terraform, and deploying containerized applications using Docker and Kubernetes. Skilled in Linux troubleshooting, web server configuration, monitoring, and supporting production environments.

EXPERIENCE

HinsanLabs Pvt. Ltd.

Feb 2026 – Present

DevOps Engineer Intern

- Managed 4+ Ubuntu/Linux servers by configuring users, groups, file permissions, packages, system services, processes, and log management.
- Provisioned and managed 15+ AWS resources using EC2, IAM, VPC, Subnets, Internet Gateway, NAT Gateway, Route Tables, Security Groups, S3, Route 53, RDS, Elastic IP, CloudWatch, and Load Balancers.
- Designed and implemented 4+ CI/CD pipelines using Jenkins, Git, and GitHub to automate application build, testing, and deployment processes.
- Developed reusable Terraform modules to provision and manage AWS infrastructure using Infrastructure as Code (IaC).
- Containerized 10+ applications using Docker and deployed workloads to Kubernetes using Deployments, Services, ConfigMaps, Secrets, and Ingress.
- Configured and maintained Nginx web servers by implementing HTTP/HTTPS redirection and SSL/TLS encryption.
- Automated operational tasks using Bash scripting, including server monitoring, log rotation, backups, and scheduled jobs using Cron.
- Monitored infrastructure and application performance using Amazon CloudWatch, Prometheus, and Grafana.
- Collaborated with development teams using Git and GitHub through branching, pull requests, code reviews, merging, and conflict resolution.
- Performed database administration, backup, and recovery operations for MySQL while gaining exposure to MongoDB administration.
- Troubleshoot Linux, networking, Docker, Kubernetes, Jenkins, and deployment issues while working in an Agile environment.

Skills

- **Cloud Platform:** AWS (EC2, IAM, VPC, S3, RDS, Route 53, CloudWatch, ECR, ELB), Azure (Basic Knowledge), GCP (Basic Knowledge)
- **DevOps Tools:** Jenkins, Docker, Kubernetes, Terraform, Argo CD
- **CI/CD Version Control:** Git Branching, Pull Requests, Version Control
- **Monitoring:** Amazon CloudWatch, Prometheus, Grafana
- **Operating Systems:** Linux (Ubuntu), Windows, Linux Administration, Systemd, Process & Log Management
- **Scripting & Automation:** Bash, Shell Scripting, Cron Jobs
- **Networking:** TCP/IP, SSH, DNS, HTTP/HTTPS, SSL/TLS
- **Databases:** MySQL, PostgreSQL (Basic), MongoDB (Basic), MariaDB, Amazon RDS.

Projects

GitOps-Driven Multi-Microservice Platform on Amazon EKS

"GitHub"

(AWS — Amazon EKS — Docker — Kubernetes — Jenkins — Argo CD — Prometheus — Grafana — Git)

- Built and deployed a containerized microservices app on **Amazon EKS** using **Docker** and **Kubernetes**. Set up and configured the **CI/CD pipelines** using **Jenkins**, **Git**, and **Argo CD**, and implemented some GitOps concepts to automate the development process.
- Experienced with K8s components: **Deployments**, **Services**, **ConfigMaps**, **Secrets**, **Ingress**, and **HPA** to configure pods and manage a highly scalable application.
- Worked with AWS: **EC2**, **IAM**, **VPC**, **ECR**, **Route 53**, **Security Groups**, and **CloudWatch** during the development and operation of applications.
- Configured monitoring and visualization tools such as Amazon CloudWatch, **Prometheus**, and **Grafana** and performed **troubleshooting** tasks related to containers, K8s, and deployments.
- Experienced with **Linux-based OS (Ubuntu)**, **version control systems (Git)**, and scripting languages such as Bash to implement automation.

Automated CI/CD Pipeline with Jenkins and Container Security

"GitHub"

(Jenkins — Docker — Amazon EKS — Terraform — SonarQube — Trivy — Amazon ECR — GitHub)

- Developed a CI/CD pipeline using **Jenkins**, **Git**, **GitHub** for building, testing, and deploying the application.
- Containerized application using **Docker**, committed images to **Amazon ECR**, and deployed containers to **Amazon EKS** using Kubernetes manifests.
- Used **SonarQube** for code quality analysis and **Trivy** for image security scanning.
- Provisioned **Infrastructure as a Code (IaC)** using Terraform and worked with **EC2**, **IAM**, **VPC**, **Security groups**, and **CloudWatch**.
- Conducted deployment, log inspection, troubleshooting, and performance analysis using Amazon CloudWatch, Linux (Ubuntu), Bash, and Git branching. Deployed and tested web applications using **HTTP/HTTPS**, **DNS**, and **SSL/TLS** concepts.

Education

B.Tech. Computer Science and Engineering

May 2025

Dr. Daulatrao Aher College of Engineering, Shivaji University

CGPA: 8.33/10

Certifications

AWS Certified Cloud Practitioner

Jan 2026

Amazon Web Services (AWS)

[View Certificate](#)
