PROFESSIONAL SUMMARY

DevOps Engineer with 6 Months of Cloud and DevOps Experience: Linux Admin, AWS, CI/CD, Docker, Kubernetes, and Terraform Professional Summary DevOps engineer passionate about Linux Administration, AWS Cloud, and CI/CD. Hands-on experience with Ubuntu/Linux OS, AWS EC2, IAM, VPC, S3, and Route 53 services, CloudWatch, Git, GitHub, and Jenkins for CI/CD, Bash scripting, Nginx, and monitoring tools. Proven working knowledge in deployment and troubleshooting of applications and systems in production environment. Strong background in Infrastructure as Code with Terraform and experience with containers.docker, Kubernetes, CI/CD pipelines in Jenkins, and Git source control.

EXPERIENCE

HinsanLabs Pvt. Ltd.

Feb 2026 – Present

DevOps Engineer Intern

- Administered **Linux (Ubuntu)** servers by configuring Users, Groups, File Permissions, Packages, Systemd services, processes, and logs, and performing regular system troubleshooting.
- Provisioned AWS Cloud Environment (**EC2, IAM, VPC, Subnets, Internet Gateway, NAT Gateway, Security Groups, Route Tables, S3, Route-53, RDS, Elastic IPs, CloudWatch, Load Balancers**) for application hosting.
- Designed and implemented **CI/CD** pipelines using Jenkins and Version Control tools such as **Git + GitHub** to help automate the process of building, testing, and deploying code to production.
- Used **Terraform** to design reusable modules for deploying and managing cloud infrastructure (IaC)
- Containerized applications using **Docker** while managing Docker Images + Containers, and deploying applications to **Kubernetes** using Deployments, Services, ConfigMaps, Secrets, and Ingress.
- Configured **Nginx** as a web server, performed **HTTP/HTTPS** Redirections, and configured SSL/TLS to encrypt data in transit.
- Used **Bash Shell/Scripting** to deploy and manage applications while also scheduling tasks such as server **monitoring, log rotation, backups**, and more using **Cron Jobs**.
- Monitored Application + Infrastructure Performance using tools such as **Amazon CloudWatch, Prometheus, and Grafana**.
- Used **Git + GitHub** for version control while also performing Code **Reviews, Branching, Merging, conflict resolution**, and more to help streamline team collaboration.
- Performed basic administration, backup, and recovery operations on **MySQL Databases** while also learning the fundamentals of **MongoDB Administration**.
- Troubleshoot **Linux Servers, Networking, Deployments, Docker, Kubernetes, and Jenkins** while also documenting and communicating with team members in an Agile Environment.

Skills

- **Operating Systems:** Linux (Ubuntu), Windows, Linux Administration, Systemd, Process & Log Management
- **Cloud Platform:** AWS (EC2, IAM, VPC, S3, Route 53, CloudWatch, Security Groups, RDS), Azure, GCP
- **DevOps Tools:** Git, GitHub, Jenkins, Docker, Kubernetes, Terraform
- **Scripting & Automation:** Bash, Shell Scripting, Cron Jobs
- **Networking:** HTTP/HTTPS, SSH, TCP/IP, Firewalls
- **Databases:** MySQL, Amazon RDS (MySQL), PostgreSQL (Basic), MongoDB (Basic), MariaDB, Database Backup & Restore
- **Monitoring:** Amazon CloudWatch, Prometheus, Grafana
- **Version Control:** Git Branching, Pull Requests, Version Control

Projects

GitOps-Driven Multi-Microservice Platform on Amazon EKS

GitHub

(AWS — Amazon EKS — Docker — Kubernetes — Jenkins — Argo CD — Prometheus — Grafana — Git)

- Built and deployed a containerized microservices app on **Amazon EKS** using **Docker** and **Kubernetes**. Set up and configured the **CI/CD pipelines** using **Jenkins**, **Git**, and **Argo CD**, and implemented some GitOps concepts to automate the development process.
- Experienced with K8s components: **Deployments**, **Services**, **ConfigMaps**, **Secrets**, **Ingress**, and **HPA** to configure pods and manage a highly scalable application.
- Worked with AWS: **EC2**, **IAM**, **VPC**, **ECR**, **Route 53**, **Security Groups**, and **CloudWatch** during the development and operation of applications.
- Configured monitoring and visualization tools such as Amazon CloudWatch, **Prometheus**, and **Grafana** and performed **troubleshooting** tasks related to containers, K8s, and deployments.
- Experienced with **Linux-based OS (Ubuntu)**, **version control systems (Git)**, and scripting languages such as Bash to implement automation.

Automated CI/CD Pipeline with Jenkins and Container Security

GitHub

(Jenkins — Docker — Amazon EKS — Terraform — SonarQube — Trivy — Amazon ECR — GitHub)

- Developed a CI/CD pipeline using **Jenkins**, **Git**, **GitHub** for building, testing, and deploying the application.
- Containerized application using **Docker**, committed images to **Amazon ECR**, and deployed containers to **Amazon EKS** using Kubernetes manifests.
- Used **SonarQube** for code quality analysis and **Trivy** for image security scanning.
- Provisioned **Infrastructure as a Code (IaC)** using Terraform and worked with **EC2**, **IAM**, **VPC**, **Security groups**, and **CloudWatch**.
- Conducted deployment, log inspection, troubleshooting, and performance analysis using Amazon CloudWatch, Linux (Ubuntu), Bash, and Git branching. Deployed and tested web applications using **HTTP/HTTPS**, **DNS**, and **SSL/TLS** concepts.

Education

B.Tech. Computer Science and Engineering

Dr. Daulatrao Aher College of Engineering, Shivaji University

CGPA: 8.33/10

Certifications

AWS Certified Cloud Practitioner

Amazon Web Services (AWS)

Jan 2026

[View Certificate](#)
